SE-ZX FLOUR DISTRIBUTOR- APPLICATION OVERVIEW

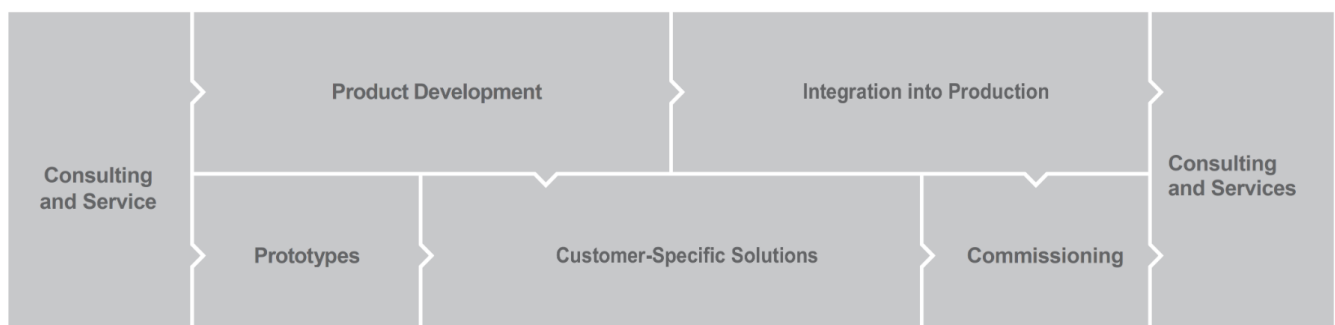

The Flour Distributor is designed to ensure uniform and controlled distribution of flour onto plansifter machines in modern flour milling plants. Installed directly on top of the sifter, the machine receives product from a central inlet and distributes it evenly to multiple sieve chambers through a precisely engineered internal distribution mechanism. By balancing material flow across all outlets, the Flour Distributor prevents uneven loading, material buildup, and screening inefficiencies. This controlled feeding process improves sifting performance, enhances flour quality, and stabilizes production output. Engineered for continuous industrial operation, the Flour Distributor offers reliable performance, low maintenance requirements, and long service life. Its compact and robust design allows easy integration into existing milling lines while reducing product loss and supporting efficient, high-capacity milling operations.

FEATURES & ADVANTAGES

- ▶ Ensures uniform and balanced flour distribution to plansifter machines
- ▶ Improves sifting efficiency and overall milling performance
- ▶ Prevents material accumulation and uneven sieve loading
- ▶ Designed for continuous and stable industrial operation
- ▶ Compact structure for easy installation on existing milling lines
- ▶ Robust construction for long service life in demanding environments
- ▶ Low maintenance requirements and easy inspection access
- ▶ Reduces product loss and supports consistent flour quality

APPLICATION FIELDS

- ▶ Flour mills
- ▶ Semolina plants
- ▶ Whole wheat flour mills
- ▶ Bread crumb (galeta) mills
- ▶ Corn flour mills
- ▶ Pasta production facilities
- ▶ Grain and cereal processing plants
