SE-DWTB HORIZONTAL INTENSIVE DAMPENER - APPLICATION OVERVIEW

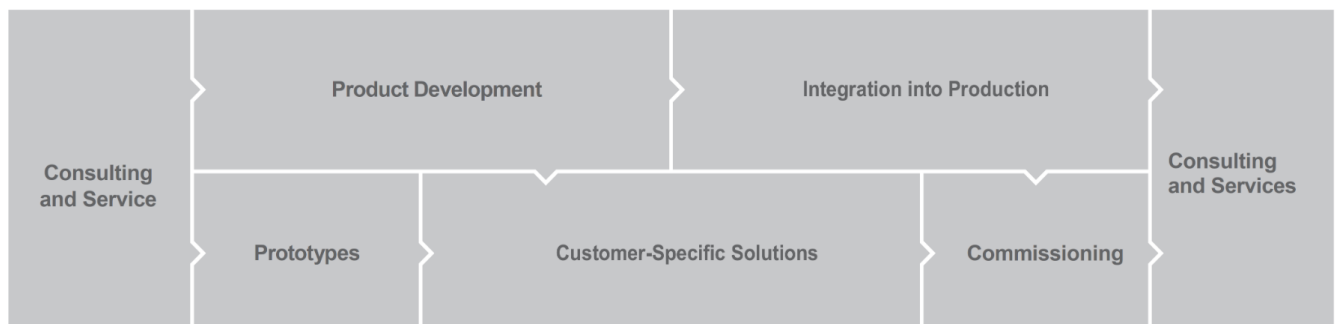

The Horizontal Intensive Dampener is an advanced machine engineered to add moisture to wheat kernels in a consistent and efficient way during grain processing operations. Unlike inclined models, its horizontal design ensures uniform grain distribution and optimal contact with injected water. This enhances hydration balance and prepares the grain for superior milling results. With a rotor-driven turbulence system and precision nozzles, it delivers fast and even water absorption across all kernels. Built for hygienic, continuous operation, it offers high throughput, reduced wear, and minimal maintenance requirements, making it ideal for modern flour and feed production lines.
